Install the Adobe Suite from Software Center

WCPS Windows computers | Package shown: Adobe 2025 LC

Before you begin: Save your work, close Adobe programs, connect the computer to power and use a reliable network connection. Allow **roughly 45 minutes** for installation because the Adobe package is large. Use Software Center on your WCPS-managed Windows computer.

STEP 1 Open Software Center

Select **Start** and type **Software Center**. Select **Software Center** under Best match. Wait for the application to open.

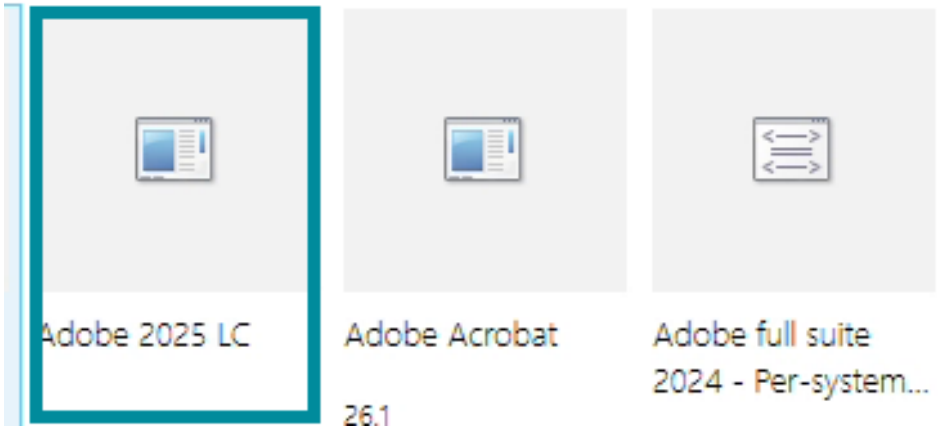

Choose the Software Center app in Windows Search.

STEP 2 Wait for the applications list

Select **Applications** in the left menu. Choose the **All** tab and set **Filter** to **All** if needed. The list may be blank briefly while Software Center loads; wait for the tiles to appear.

STEP 3 Choose Adobe 2025 LC

Select the **Adobe 2025 LC** tile to open its details. You can enter **Adobe** in the Search box to narrow the list. Choose the package demonstrated here; the separate **Adobe Acrobat** tile is not the full suite package.

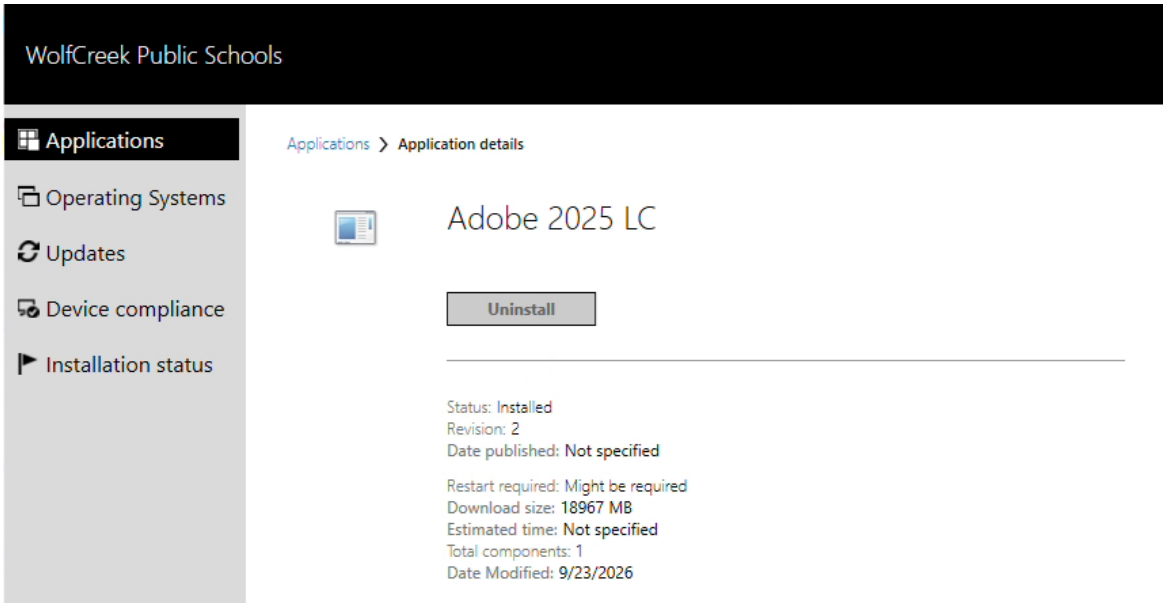

Select Adobe 2025 LC (outlined). Other Adobe tiles are separate packages.

Install and confirm completion

Check the package name and status before selecting an action.

STEP 4 Start installation, or check if installed

On the Application details page, confirm the name is **Adobe 2025 LC**. If it is available for installation, select **Install**. If the page already says **Status: Installed** and shows **Uninstall**, installation is complete on this computer. Leave it installed and continue to step 7.

Already-installed example from the WCPS recording. The Uninstall button is not an installation step. Do not select it to follow this guide.

STEP 5 Monitor the installation

Select **Installation status** in the left menu and locate the Adobe package. Let downloading and installation finish. Keep the computer powered on and connected; avoid restarting or shutting down while installation is running.

Allow roughly 45 minutes for installation. The package is large: the recording lists a download size of 18,967 MB (about 19 GB). Actual time varies with the network connection and computer. The download size is not the total free disk space required.

STEP 6 Restart if requested

Wait until Software Center reports **Installed**. If Windows or Software Center asks for a restart to complete the installation, save your work and restart. Sign back in before opening an Adobe program.

Ready for the next step? Confirm the package shows Installed and complete any requested restart before opening Adobe. If installation fails, record the error and use the help section on the next page.

Open Adobe and check access

Installing the software and signing in to your licensed account are separate steps.

STEP 7 Open the Adobe program you need

Use **Start** to find and open an installed Adobe program, such as Acrobat or Photoshop if included in your package. If asked to sign in, select **Continue with Google** and choose your WCPS Google account. Complete the normal verification prompts. If offered a profile choice, use the company or school profile associated with your WCPS licence.

For screenshots and the full sign-in procedure, open Sign In to an Adobe Program.

STEP 8 Confirm it works

Open a file and check the feature you need. Confirm Software Center still shows the package as installed and that the Adobe program opens with the expected access. A trial or subscription message may require a licence check even when installation succeeded.

If you need help

What you see	What to do
Software Center is missing or will not load	Confirm you are using a WCPS-managed Windows computer. If it still will not open, contact Technology Services.
Adobe 2025 LC is not listed	Check Applications, All, Filter: All, then search for Adobe. Check Installation status as well. If the package is still missing, ask Technology Services to confirm availability for your computer.
Failed, an error code or no apparent progress	Record the displayed status/error code and take a screenshot. Keep the computer connected and contact Technology Services if the issue persists. Do not repeatedly uninstall and reinstall the suite.
Installed, but an app is missing or access is limited	Search Start for the app and complete the WCPS sign-in. If an expected app is missing, or a trial message remains, request a package/licence check. Do not purchase a personal subscription to fix WCPS access.

Help and reference links

Submit a Technology Services work order - include your school/location, computer name or asset tag, package name, status/error code and a screenshot.
